

Office of

AUBURN WATER DISTRICT

Office Telephone # 784-6469

The regular monthly meeting of the Trustees of the Auburn Water District will be held **at the office of the Auburn Water District, 268 Court Street, on Wednesday, June 17, 2026 at 4:00 P.M.**

Regular Meeting AGENDA

1. Approve Minutes of Regular Meeting of May 20, 2026.
2. Financial Report Update -***Michael Bailey***.
3. Public Comment.
4. New Business
 - Draft Charter Changes.
 - Lake Auburn Watershed Protection Commission, Appointment.
5. Old Business
 - Water Quality.
 - System-Wide Meter Conversion, Status Update.
 - Facilities Assessment.
 - Lake Auburn Infrastructure Planning Study.
 - Lakeshore Drive MPI Project Update.
 - Activity Report.
6. Executive Session Pursuant to 1 M.R.S.A § 405(6) (A) to Discuss a Personnel Matter.
7. Trustee Open Session.
8. Adjourn Regular Meeting.

Upcoming: Water Trustee Meeting July 22, 2026.

May 20th, 2026

Page 1

The Regular Meeting of the trustees of the Water District was held at the office of the Auburn Water District, 268 Court Street, on **Wednesday, May 20th, at 4:00 pm.**

Members Present: Denis Bergeron (President), Robert Cavanagh (Treasurer), Jeffrey Harmon, Bruce Rioux, and Timothy Simpson.

Also present: Mike Broadbent (Superintendent), Mike Abbott (District Engineer), and Mike Bailey (Finance Director).

Members Absent: Eric Gould

Public Attendance: Stephen Beal

Agenda Item 1: Approve Minutes of the Regular Meeting of April 22nd, 2026 – On the motion of Robert Cavanagh, seconded by Bruce Rioux, it was voted to approve the minutes of the Regular Meeting on April 22nd, 2026, with a modification.

Passed 5-0

Agenda Item 2: Financial Report – The Finance Director, Mike Bailey, provided a verbal presentation of the financial report for the preceding month.

Agenda Item 3: Public Comment – Stephen Beal was in attendance and commented on the ongoing Watershed projects.

Agenda Item 4: New Business

Merging of the Districts – The two Districts are considering merging into a single quasi-municipal entity. Since both were incorporated around the same time and originally shared the same board of trustees, combining them could provide several benefits, like reducing administrative work related to shared assets. Another factor driving the proposal is the growing difficulty in recruiting volunteers for trustee positions, with three vacancies currently unfilled.

Discussions have already taken place with the Greater Augusta Utility District, which successfully merged the Augusta Water District and Augusta Sanitary District through charter changes over the past decade. Copies of their merged charter have been obtained as a reference.

Work is now underway to combine the two Districts' governing documents into a single charter draft, which is expected to be completed by the end of May and presented at the June Trustee meetings.

May 20th, 2026

Page 2

System-Wide Meter Conversion Update – The Auburn Water District is beginning a system-wide replacement of all water meters with new Kamstrup meters. The project will be completed in partnership with EJ Prescott and HydroCorp.

The conversion project is scheduled to begin on June 15th, 2026. Along with replacing meters, the District will install two new collectors to improve smart meter service coverage. Additionally, staff coordinate inventory management for the meters and determine the best options for disposing of or repurposing the removed meters.

2025 Gull Management Report – The District continues to partner with the City of Lewiston and the United States Department of Agriculture to manage the resident gull population in the Auburn area. Trustees received the full report by email, and the executive summary was included in the May meeting packets.

Since the gull management program began in 2005, bacteria levels in Lake Auburn have significantly decreased, helping the District maintain its filtration waiver. The report notes that while a large gull population remains in the Lewiston-Auburn area, the birds have largely learned to avoid the lake, and bacteria levels remain low due to the active management program.

Lake Auburn Watershed Protection Commission Appointment – The Auburn Water District appoints one Commissioner each year to serve a three-year term running from June to June. District rules require that no more than one Commissioner, and at least one Commissioner, be a current District Trustee. The current Commissioners are:

- Camille Parrish, serving June 2025–June 2028
- Bruce Rioux, serving June 2024–June 2027
- Evan Cyr, serving June 2023–June 2026

District staff have posted the volunteer application form on the District website and will accept applications through June 17th. Applications will be reviewed, and a new appointment will be made at the regular Trustee meeting on June 17th, 2026.

Agenda Item 5: Old Business

Water Quality Update – The Superintendent, Mike Broadbent, provided a verbal presentation on the preceding month's water quality in Lake Auburn.

Facilities Assessment – Weston & Sampson is developing potential site layout options for the existing properties at 268 Court Street. Although the layouts have not yet been shared, the firm has indicated that the on-site options may not accommodate all the features available in a potential off-site facility. Preliminary visuals and a draft report are expected to be presented at the June trustee meetings.

May 20th, 2026

Page 3

Lake Auburn Infrastructure Planning Study – CDM Smith resubmitted a revised draft report for the project. The conclusions of the report were included in the packet for discussion purposes. The final report was expected by May 20th, 2026, and will be forwarded to all trustees upon receipt.

Lakeshore Drive MPI Project Update – The project received strong bid interest from multiple contractors, resulting in a qualified low bid approximately \$200K below the engineer's estimate. The contract was awarded to CH Stevenson. Work is scheduled to begin in September and is expected to be completed within approximately three weeks.

Activity Report – The District Engineer, Mike Abbott, provided a verbal presentation on the preceding month's activity.

Agenda Item 6: Executive Session Pursuant to 1 M.R.S.A. 405 (6) (A) to Discuss a Personnel Matter –

On the motion of **Timothy Simpson**, seconded by **Jeffrey Harmon**, there was a vote to move the meeting into Executive Session.

Passed 5-0

At 5:15 PM, the Trustees concluded their meeting in Executive Session. At that time, there was a motion by **Jeffrey Harmon**, seconded by **Robert Cavanagh**, to adopt the new salary and wage structure recommended by the Superintendent.

Passed 5-0

Agenda Item 7: Trustee Open Session: There was no further discussion at this time.

Agenda Item 8: Adjournment of the Regular Meeting: On the motion of **Timothy Simpson**, seconded by **Jeffrey Harmon**, there was a vote to adjourn the meeting.

Passed 5-0

Respectfully submitted,

Tiffany Spence

Re: Discussion of June Agenda Items

Water Trustees

Financial Report Highlights

Financial Update- Revenues are slightly above budget, and expenses are under budget. On the revenue side, water sales are under budget due to the delayed impact of the rate increases. In May, we recognized our first cycle of monthly billings under the higher rate. We recently finished our last quarterly cycle under the old rate in June, and the billings for the rest of the year, beginning in July will be at the higher rate. This should reduce the variance from the budget by the end of the year. Public fire protection is over budget because we bill these services three months in advance, with two of those months reflected in the budget column due to timing. Miscellaneous operating revenue is over budget partially due to a gain recognized in May on a trailer that was auctioned off. On the expense side, payroll and benefits are under budget due to our vacant positions, the timing of overtime earned, the allocation of labor to projects, and other expense accounts such as jobbing, and an excess clothing allowance and training budget compared to the amount used to date due to timing. The UV treatment plant expenses are under budget due to timing with less expenses during the colder months. The Lake Auburn Watershed expenses are slightly under budget due to netting expenses with payroll reimbursements for our Education and Outreach Coordinator. Interest expense is under budget as we're just beginning to recognize interest expense on the \$2.7 million meter bond issued in May. There were no debt service payments in May. Cash on hand has increased significantly due to the closing of the \$2.7 million meter replacement

bond. Cash on hand of \$5.8 million is sufficient to service existing debt and fund operations.

As an update on the financial statement audit, I reached out to the auditors to see if there's anything they need from us to wrap up their test work. They're working to prepare a list of any outstanding items that have come as a result of initial test work or management review of the work already performed. After we work through anything in that final request list, their reports department will begin drafting the statements for my review. They said the reports process typically takes around two weeks. We're still aiming to have the audit completed by late July or early August.

New Business

Draft Charter Changes- Included with the packets is a draft document of the merged charters; this is still in development. When I started this, I was trying to morph the language from each document into one new document. This was not easy and it led to many assumptions. After an additional conversation with the Greater Augusta Utility District, I changed my approach. Under the different sections of the new charter there is a part 1 and part 2. Part 1 represents the approved language of the Water Charter and Part 2 represents the Sewer Charter. This was their approach, and it worked very well to differentiate between the two divisions of the now single organization. I'll continue to work on this and update the Boards on my progress.

***Copies of the draft document will be given out at the meeting.*

Lake Auburn Watershed Protection Commission, Appointment- The District has the responsibility to make an appointment of an Auburn resident, to the Lake Auburn Watershed Protection Commission. We received one application from Evan Cyr. Evan is currently appointed and he is interested in continuing with the Commission. Evan's application was included with the packets.

*****Action Item** Make the appointment, to serve a three-year term as Commissioner.***

Old Business

Water Quality Update- Water quality within Lake Auburn remains favorable. Turbidity, water elevation, and water temperature are all following at or near seasonal average. One anomaly that staff have noted is an above-average concentration of chlorophyll-A within the deeper sections of the lake. While this is not an immediate threat, it's an indicator that we could see an increase in algae, which could subsequently reduce oxygen levels.

The 2025 Consumer Confidence Report (CCR) is now published and on the District's website as of June 2nd, 2026. This is currently an annual requirement of the District and all water systems in Maine. Starting in 2027, the District will have to publish a CCR every six months. A copy of the report was included with the packets.

System Wide Meter Conversion, Status Update- Over the last month, EJP and Hydrocorp have sent a series of three letters to customers in Cycle 1 and Book 80 (2,422 customers). As of 8:50am on June 10th there are 1,363 appointments scheduled, the current average is 50 appointments booking/daily. Meter replacements will start on June 15th. I'm very impressed with the response of our customers and the performance of the contractors to this point.

The last letter in the series warns customers that participation with the exchange is mandatory, and failure to comply with the notices could lead to disconnection. The next step in this process is on the District, I'm proposing we send out one additional notice to these customers before a disconnect notice. Unfortunately, this will increase the workload on our internal staff and it will not be popular with customers.

Facilities Assessment Update- Weston and Sampson has provide three conceptual site layouts with cost estimates of new and renovated facilities on our current site:

- Option 1 includes a new administrative building, a completely re-developed fleet storage with additional vehicle storage space.
- Option 2A includes renovations to our existing administrative spaces to include ADA access and optimization of fleet storage in addition to a detached fleet storage building and storage space.
- Option 2B includes the same renovations and additional fleet storage and it includes a cold storage building with additional parking.

With all three of these options there is an overall reduction in square footage compared to the previously reviewed options at an off-site property. These options do not include space for a decant station, aggregate storage and or a wash bay.

Lake Auburn Infrastructure Planning Study- In May I sent all Board members a copy of the completed study. Included with the packets is a summary memo on the report and my recommendations for moving forward.

Lakeshore Drive MPI, Project Update- At this time, the status of this project has not changed since last month. Work is scheduled to begin in September, 2026.

Activity Report- The water and sewer crews have been quite busy lowering and raising structures (water gate valve boxes, manholes) on portions of Court, Turner Street, Minot Ave, Spring Street, Western Avenue and Allied Road in conjunction with City and DOT road projects. We have had to put two employees (one from each crew)

on the night shift to raise water gates during night paving on Court and Turner St. This will continue through at least part of June while these streets are being finished, and a stretch of Minot Avenue is milled and paved. We will also need to manage some water gate valves on Empire Road for a DOT overlay project that was recently brought to our attention.

We have continued flushing hydrants throughout the system and have made great progress, with about two thirds of our hydrants flushed so far. Almost all of the flushing has been conducted during the normal workday hours rather than at night and, to date, we have received very few calls with concerns about water quality or pressure.

The crew has continued to work through a staffing shortage so for the time being we have delayed the start of the proposed main water extension on Hotel Road. However, both vacancies on the crew have now been filled, with Danny McAlister who started work on 6/8 and Collin Hayward who will be starting in a couple of weeks.

On behalf of LAWPC, the Water District is filing an application with the Maine Bureau of Parks & Lands to reconstruct the Lake Auburn Boat Launch under the Boating Facilities Fund. If awarded, this work would likely be completed next fall (2027).

Recently, we applied for and were awarded two safety grants through the Maine Municipal Association's 2026 Ed MacDonald Safety Grant program, totaling \$5,575.65 for the purchase of a variety of safety gear, including new safety harnesses and other equipment for our HazMat Trailer, personal safety lights for night work and safety lift mounting gear for confined space entry at our water storage tanks. We plan to start purchasing this equipment right away.

Some of the crew are part of our HazMat and Confined Space Rescue team. They are participating in a specialized confined space rescue training session in June.

Upcoming Meetings: Regular Trustee Meeting of July 22nd, 2026.

AUBURN WATER DISTRICT

Lake Auburn Watershed Protection Commission Volunteer Form

We appreciate your willingness to volunteer service to our community. The Auburn Water District is responsible for appointing 3 representatives to the Lake Auburn Watershed Protection Commission. Typical appointments are for 3 year terms. Meetings are usually held every other month.

If you have any questions or concerns, please contact Auburn Water District Superintendent Mike Broadbent at either mbroadbent@awsd.org or Tel # 784-6469. Please complete the form below to allow the Auburn Water District Trustees to consider your background or qualifications for service. Forms should be submitted to the Auburn Water District office. Thank you!

Name: Evan Cyr New Appointment ☐
Re-appointment ☒ Ward: 2
Mailing Address: 122 Granite St Auburn, ME 04210
Physical Address: - same -
Telephone #: N/A Home _____ Work (207) 991-1159 Cell _____
E-Mail Address: egcyr@hotmail.com Years as Auburn Resident: _____

Describe your education and/or experience (check here ☐ if using reverse side for extra space):

4.5 yrs on LAWPC, 2 yrs on Auburn Zoning Board of Appeals,
12 yrs on Planning Board - Auburn, various other municipal & community
committees.

BA - Anthropology, MA - Secondary Science Education, CAS - Education
Leadership, Various MMA & FOAA trainings

Why would you like to serve on LAWPC? (check here ☒ if using reverse side for extra space):

See reverse

What is your vision for Lake Auburn? (check here ☒ if using reverse side for extra space):

See reverse

Evan Cyr

Date

5/26/2016

I value serving on LAWPC because it sits at the intersection of things I genuinely care about: public service, science, local history, practical land-use decisions, and protecting an important resource that transcends any one neighborhood or political debate. Lake Auburn is one of our region's most important resources. It is, first and foremost, a source of clean drinking water for thousands in the region and protecting that function of the lake is LAWPC's primary and central responsibility. At the same time, the watershed is an important resource for trails, fishing, wild life, public access and shared community identity and memory. My vision ~~of~~ for the lake is one that prioritizes protection through careful, science-based, long-term stewardship that protects our drinking water while recognizing the broader role the watershed plays in our regional community life. Ultimately stewardship requires consistency, transparency, and practical judgement so that the community does not lose sight of the importance of a healthy lake and watershed.

2025 Consumer Confidence Report

We are pleased to present this year's Annual Water Quality Report, also known as the Consumer Confidence Report or CCR. This report will provide you with information about the quality of your water for the year 2025. It is our goal to continuously produce adequate supplies of safe and affordable drinking water. We strive to apply the best available treatment systems and are committed to protecting our sole water resource, Lake Auburn. Please take time to read this report. If you have any questions or concerns, feel free to contact us at 207-784-6469.

The Auburn Water District (AWD) monitors your drinking water according to Federal and State rules and regulations. The information provided here shows the results of our monitoring from January 1, 2025, through December 31, 2025. Some substances will be reported with earlier dates if they were not tested for in 2025.

In 2025 the Auburn Water District produced and treated approximately 908 million gallons of safe drinking water to more than 15,000 customers.

WHERE DOES MY WATER COME FROM?

Your drinking water comes from Lake Auburn, which has been the source of Lewiston and Auburn's public drinking water since 1875. Lake Auburn is fed by a mostly forested watershed that includes portions of Buckfield, Turner, Hebron, Minot, and East Auburn. Due to the high quality of Lake Auburn's water, the EPA has exempted the Auburn Water District and Lewiston Water Division from the requirement to filter the water prior to disinfection. This exemption reduces treatment costs while providing excellent, safe water to our consumers. To ensure long-term protection of the water source, the two Districts formed the Lake Auburn Watershed Protection Commission in 1993. This commission is empowered to protect the Lake and surrounding watershed. The most effective, safest, and least expensive method for keeping Lake Auburn clean is to ensure that water entering the Lake is protected through a well-managed watershed. For more information about watershed protection and how you can do your part visit: www.lakeauburnwater.org or call 207-784-6469.

DESCRIPTION OF WATER TREATMENT PROCESS:

Water from Lake Auburn enters the treatment process through an intake pipe. The water flows through a coarse screen and drum strainer. This is followed by ultraviolet light treatment, which inactivates targeted viruses that may be present in the water. Chlorine is added for disinfection; the alkalinity is increased, and pH is adjusted. Fluoride is added for dental health benefits. A corrosion inhibitor, orthophosphate is added to prevent customer owned lead and copper plumbing materials from leaching into their drinking water. Chlorine is converted to chloramine by adding ammonia sulfate and finished water is then delivered to the distribution system.

WE ALWAYS AIM TO DELIVER SAFE DRINKING WATER TO YOUR TAP!

State Licensed operators run your water system. Drinking water quality is monitored 24 hours a day and analyzed 7 days a week. We conduct thousands of water samples each year to monitor water quality. In addition, we closely monitor water quality in Lake Auburn other ponds and tributary streams that flow into the Lake. Technology enables safety systems to ensure that treatment continues to operate correctly.

SOURCE WATER ASSESSMENT:

Sources of drinking water include rivers, lakes, ponds, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and radioactive material and can pick up substances resulting from

human or animal activity. The Maine Drinking Water Program (DWP) has evaluated all public water supplies as part of the Source Water Assessment Program (SWAP). The assessments included geology, hydrology, land uses, water testing information, and the extent of land ownership or protection by local ordinance to see how likely our drinking water source is to being contaminated by human activities in the future. Assessment results are available at town offices and public water systems. For more information about the SWAP, please contact the DWP at 207-287-2070.

ARE THERE CONTAMINANTS IN MY DRINKING WATER?

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or manmade. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

PFAS TESTING INFORMATION

PFAS are widely used, long-lasting chemicals, components that break down very slowly over time. Because of their widespread use and their persistence in the environment, many PFAS are found in the blood of people and animals worldwide and are present at low levels in various food products and in the environment. PFAS are found in water, air, soil and living things at locations across the nation and the globe. Scientific studies have shown that exposure to some PFAS in the environment may be linked to harmful health effects in humans and animals. There are thousands of PFAS chemicals, and they are found in many different consumer, commercial, and industrial products. This makes it challenging to study and assess the potential human health and environmental risks. The Auburn Water District sampled for PFAS through the UCMR3 (Unregulated Contaminant Rule) in 2013-2014. We found no detections of the six PFAS compounds tested for. In 2022 the Maine State Legislature enacted S.P. 64 (Resolve, To Protect Consumers of Public Drinking Water by Establishing Maximum Contaminant Levels for Certain Substances and Contaminants). Through this program and subsequent required testing, the Auburn Water District found no detections of the 25 required PFAS compounds. All samples were analyzed by an independent certified lab. No detections of PFAS compounds in the drinking water source for Auburn is largely a result of watershed protection efforts that have prevented common practices that are known to spread these compounds, such as land application of wastewater sludge, and use of certain firefighting foams, around Lake Auburn. The Auburn Water District will be sampling for PFAS in 2026 as part of the new EPA quarterly monitoring requirements.

For more information about PFAS in Public Water Systems, visit: <https://www.maine.gov/dhhs/mecdc/environmental-health/dwp/pws/pfas.shtml#highlights> or call the Maine Drinking Water Program general number at 207-287-2070.

UNREGULATED CONTAMINANTS MONITORING

Unregulated contaminants are those for which the U.S. EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist the EPA in determining the occurrence of these contaminants in drinking water and whether future regulations are warranted. In 2023 we participated in the fifth round of the Unregulated Contaminant Monitoring Rule (UCMR 5). We had no detections of any of the contaminants in this round of testing. UCMR 6 contaminant list is currently being promulgated.

2025 EVENTS

The Auburn Water District completed water main replacements on Spring Street and Loring Avenue in 2025. The District also bid and selected a new water meter platform. We installed our first AMI tower and 350 new smart meters. The District, in partnership with the City of Lewiston and the Maine Department of Transportation, completed 60% design drawings for the replacement on the Townsend Brook Culvert on Lake Shore Drive. The District received a 50% matching grant for this project as part of our ongoing watershed protection efforts.

PLANS FOR 2026

AWD is budgeted to replace about ½ mile of water main on Hotel Road and a small section of main near East Shore Road on Taylor Pond and may complete additional water main replacement if time and budget allow, in addition to continued Lead and Copper investigations. The District has selected a contractor to replace our old and aging service meters, with the intention to replace all meters in our system by the end of 2026. The new meters and billing platform will reduce our operating costs, provide more service and support to our customers and offer greater accuracy than our current meters.

WHAT'S IN YOUR WATER?

This table provides Auburn Water District's 2025 water quality sampling test results for the public water supply.

Parameter	Date	Results	MCL	MCLG	Possible Sources of Contamination
MICROBIOLOGICAL					
COLIFORM (TCR) (9)	2025	0 pos	1 pos/mo or 5%	0 pos	Naturally present in the environment.
INORGANIC COMPOUNDS					
ARSENIC(1)	3/6/2025	1 ppb	10 ppb	0 ppb	Erosion of natural deposits. Runoff from orchards,glass and electronics production wastes.
BARIUM	3/6/2025	0.0015 ppm	2 ppm	2 ppm	Discharge of drilling wastes. Discharge from metal refineries. Erosion of natural deposits.
FLUORIDE (3)	3/6/2025	0.71 ppm	4 ppm	4 ppm	Erosion of natural deposits. Water additive which promotes strong teeth. Discharge from fertilizer and aluminum factories.
LEAD AND COPPER					
COPPER 90TH% VALUE (5)	1/1/2021 - 12/31/2023	0.2 ppm Range (0.0372-0.233 ppm)	AL=1.3 ppm	1.3 ppm	Corrosion of household plumbing systems.
Number of sampling sites exceeding the Copper action level: 0					
LEAD 90TH% VALUE (5)	1/1/2021 - 12/31/2023	6.2 ppb Range (0-151 ppb)	AL=15 ppb	0 ppb	Corrosion of household plumbing systems.
Number of sampling sites exceeding the Lead action level: 2 Complete lead tap sampling data are available upon request					
DISINFECTION AND DISINFECTION BYPRODUCTS					
TOTAL HALOACETIC ACIDS (HAA5)(10)					
AVCOG (SITE#9)	LRAA (2025)	25 ppb Range (20-35 ppb)	60 ppb	0 ppb	By-product of drinking water chlorination.
AWD EP (SITE#36)	LRAA (2025)	22.5 ppb Range (20-28 ppb)	60 ppb	0 ppb	By-product of drinking water chlorination.
POLAND SPRING (SITE #32)	LRAA (2025)	23 ppb Range (17-29 ppb)	60 ppb	0 ppb	By-product of drinking water chlorination.
RIVERSIDE SS (SITE#12)	LRAA (2025)	24 ppb Range (19-30 ppb)	60 ppb	0 ppb	By-product of drinking water chlorination.
TOTAL TRIHALOMETHANE (TTHM)(10)					
AVCOG (SITE#9)	LRAA (2025)	27.5 ppb Range (21-39 ppb)	80 ppb	0 ppb	By-product of drinking water chlorination.
AWD EP (SITE#36)	LRAA (2025)	24.5 ppb Range (17-39 ppb)	80 ppb	0 ppb	By-product of drinking water chlorination.
POLAND SPRING (SITE #32)	LRAA (2025)	28.5 ppb Range (21-38 ppb)	80 ppb	0 ppb	By-product of drinking water chlorination.
RIVERSIDE SS (SITE#12)	LRAA (2025)	29 ppb Range (19-39 ppb)	80 ppb	0 ppb	By-product of drinking water chlorination.
CHLORINE RESIDUAL					
	RANGE 2.41-3.61 ppm		MRDL=4 PPM	MRDLG=4 PPM	By-product of drinking water chlorination.
TURBIDITY HIGHEST MONTHLY READING 2024					
TURBIDITY	11/1/2025	3.25 NTU	5 NTU	N/A	Soil runoff.
SECONDARY CONTAMINANTS (ASTHETIC STANDARDS)					
CHLORIDE	3/6/2025	16 ppm			
MANGANESE	3/6/2025	0.0028 ppm			
MAGNESIUM	3/6/2025	1.04 ppm			
SODIUM	3/6/2025	17.3 ppm			
SULFATE	3/6/2025	5 ppm			
ZINC	3/6/2025	0.0095 ppm			

TABLE DEFINITIONS

In this table you will find terms and abbreviations you may not be familiar with. The following definitions are provided to help you understand the terms.

Action Level (AL): The concentration of a contaminant that, if exceeded, triggers treatment or other requirements that a water system must follow.

Locational Running Annual Average (LRAA): A 12 month rolling average of all monthly or quarterly samples at specific sampling locations. Calculation of the RAA may contain data from the previous year.

Maximum Contaminant Level or (MCL): The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Running Annual Average (RAA): A 12 month rolling average of all monthly or quarterly samples at all locations. Calculation of the RAA may contain data from the previous year.

Secondary Maximum Contaminant Level (SMCL): Non-mandatory water quality standards.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

UNITS:

ppm = parts per million or milligrams per liter (**mg/L**)

pCi/L = picocuries per liter (a measure of radioactivity)

ppb = parts per billion or micrograms per liter (**µg/L**)

ppt = parts per trillion or nanograms per liter (**ng/L**)

MFL = million fibers per liter

pos = positive samples

NOTES:

- 1) Arsenic: While your drinking water may meet EPA's standard for Arsenic, if it contains between 5 to 10 ppb you should know that the standard balances the current understanding of arsenic's possible health effects against the costs of removing it from drinking water. EPA continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems. Quarterly compliance is based on running annual average.
- 2) E. coli: E. coli are bacteria whose presence indicates that the water may be contaminated with human or animal wastes. Human pathogens in these wastes can cause short-term effects, such as diarrhea, cramps, nausea, headaches, or other symptoms. They may pose a greater health risk for infants, young children, the elderly, and people with severely-compromised immune systems.
- 3) Fluoride: For those systems that fluoridate, fluoride levels must be maintained between 0.5 to 1.2 ppm. The optimum level is 0.7 ppm.
- 4) Gross Alpha: Action level over 5 pCi/L requires testing for Radium 226 and 228. Action level over 15 pCi/L requires testing for Uranium. Compliance is based on Gross Alpha results minus Uranium results = Net Gross Alpha.
- 5) Lead/Copper: Action levels (AL) are measured at consumer's tap. 90% of the tests must be equal to or below the action level.
- 6) Nitrate: Nitrate in drinking water at levels above 10 ppm is a health risk for infants of less than six months of age. High nitrate levels in drinking water can cause blue baby syndrome. Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity. If you are caring for an infant you should ask advice from your health provider.
- 7) PFAS: The degree of risk depends on the level of chemicals and duration of exposure. Laboratory studies of animals exposed to high doses of PFAS have shown numerous negative effects such as issues with reproduction, growth and development, thyroid function, immune system, neurology, as well as injury to the liver. Research is still relatively new, and more needs to be done to fully assess exposure effects on the human body.
- 8) Radon: The State of Maine adopted a Maximum Exposure Guideline (MEG) for Radon in drinking water at 4000 pCi/L, effective 1/1/07. If Radon exceeds the MEG in water, treatment is recommended. It is also advisable to test indoor air for Radon.
- 9) Total Coliform Bacteria: Reported as the highest monthly number of positive samples, for water systems that take less than 40 samples per month.
- 10) TTHM/HAA5: Total Trihalomethanes and Haloacetic Acids (TTHM and HAA5) are formed as a by-product of drinking water chlorination. This chemical reaction occurs when chlorine combines with naturally occurring organic matter in water. Compliance is based on LRAA.
- 11) Turbidity: Turbidity has no health effects. However, turbidity can interfere with disinfection and provide a medium for microbial growth. Turbidity may indicate the presence of disease-causing organisms. These organisms include bacteria, viruses, and parasites that can cause symptoms such as nausea, cramps, diarrhea and associated headaches
- 12) NTU: Nephelometric Turbidity Units is the unit used to measure the turbidity of a fluid or the presence of suspended particles in water

HEALTH INFORMATION

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. Contaminants that may be present in source water include:

Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.

Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.

Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production and can also come from gas stations, urban runoff, and septic systems.

Radioactive Contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

Some people may be more vulnerable to contaminants in drinking water than the general population.

Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people or their caregiver/guardian should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791) or at the following link: <https://www.epa.gov/ccr/forms/contact-us-about-consumer-confidence-reports>

LEAD AND COPPER

Lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Your public water system is responsible for providing high quality drinking water and removing lead pipes but cannot control the variety of materials used in plumbing components in your home. You share the responsibility for protecting yourself and your family from the lead in your home plumbing. You can take responsibility by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Before drinking tap water, flush your pipes for several minutes by running your tap, taking a shower, doing laundry or a load of dishes. You can also use a filter certified by an American National Standards Institute accredited certifier to reduce lead in drinking water. If you are concerned about lead in your water and wish to have your water tested, contact your public water system. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at:

<http://www.epa.gov/safewater/lead>

Our public water system completed a Lead Service Line Inventory (LSLI) as required by the Revised Lead and Copper Rule. The LSLI is publicly accessible for viewing at our office, 268 Court Street Auburn, ME 04210

SYNTHETIC ORGANIC COMPOUNDS (SOCs) all tests were completed in 2024, all results were non-detect.

Violations

No Violations in 2025

UPCOMING REGULARLY SCHEDULED MEETING(S):

The regularly scheduled Water District Trustee meetings are held the Wednesday following the third Tuesday every month at 4:00 PM, 268 Court Street in Auburn.

Please share this information with anyone who drinks this water (or their caregiver/guardian), especially those who may not have received this report directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this report in a public place or distributing copies by hand, mail, email, or another method.

Lake Auburn Infrastructure Planning Study

Final Report May 2026

The Auburn Water District, in conjunction with the City of Lewiston, contracted a consultant (CDM Smith) to completed this analysis and report. The purpose was to better understand the current water quality and to evaluate the options, costs and timelines for alternatives.

Staff worked closely with the consultant to provide water quality data owned by the water utilities and our partners. We also collected additional data as suggested by the consultant for the purposes of this study. Section 3.0 gives a nice summary of the water quality parameters that were used for this report. Staff worked with the consultant to develop potential mitigation measures that would be of the most benefit to the utilities based on the water quality. These measures were assigned one of three rankings based on the impact to the utilities (ES-2). The alternatives included: a new intake pipe to be located in a deeper section of the lake, in-lake treatments to address turbidity and algae driven turbidity spikes, and two filtration options - direct and/or membrane filtration.

Executive Summary Highlights:

The report made several short-term recommendations. These recommendations include the following:

- The water utilities should expand and refine source water monitoring to better understand turbidity, nutrients, and metals.
- The water utilities should start the preliminary design of a filtration facility to ensure preparedness should conditions change requiring filtration. This step includes piloting and preliminary design (these are the two largest factors that will ultimately determine the cost of filtration).
- The utilities should evaluate operational governance associated with managing a more complex treatment facility.

Additionally, the report recommends that another alum treatment of lake Auburn should be considered very soon based on the current water quality and observed trends.

Superintendent's recommendations:

I agree with the recommendations made by the consultant. The District needs to prepare for an additional alum treatment in the next 3-5 years. We need to ensure permitting and agreements with contractors are current and that we have a plan for the dosage that effectively treats the lake. We also need a monitoring plan in place prior to treatment. An good plan will also monitor

alum well after the application, this was missed during the previous application, making it difficult to assess the effectiveness of treatment.

We should also begin piloting treatment techniques, finding the best, most effective treatment is very important. The report gives estimated capital costs of treatment that range from 100-280 million Dollars. The wide range is due to the unknowns. We believe a good piloting program and alternative design analysis could result in costs being much lower than these estimates.

I believe our largest hurdle will be the governance of such a facility. Our current arrangements/interlocal agreements have morphed over the years. What started as sharing ownership of an intake pipe has turned into an extremely cumbersome and difficult system for both management and staff to navigate

I've requested a meeting with Lewiston's water management team. It's imperative that we're in agreement with the recommendations and that we work together to develop a timeline and budgets for implementation. I also feel that it is important that we involve and engage with elected officials in both communities. Preparation and funding for these projects will take years and we'll need the support and understanding of all partners.
